

Achieving Net Zero Carbon Emissions

Carbon Reduction Statement

Pentland Medical supports the Net Zero Strategy commissioned by NHS and UK Government. We are committed to achieve net zero carbon emission by the end of 2025 and have confirmed a 2022 baseline for our carbon emissions, under scope 1 and scope 2.

We are committed to reducing our environmental impacts for lasting sustainability. As a proud family-owned company, we value our history and look towards the future with the next generation in mind.

In 2023, Pentland Medical strive to reduce our operational carbon emissions by 30% compared to our baseline year. This will make us on track to becoming carbon neutral in our operations, supply chain and logistics by 2025.

Guided by our newly updated Environmental, Health and Safety (EHS) Policy, our business will be certified to ISO 14001 for Environmental Management Standard by the end of 2024 and our sustainability goals and data will reported.
